(1) CHICAGO CITY RAILWAY.

Chicago City & Conn. Rys. Collateral Trust owns 169,719 shares of the capital stock.

Unified Operation of Surface Lines.—See "Chicago Surface Lines" for details of unification ordinance under which the lines of this company are operated jointly with those of the Chicago Railways Co. as a single system under the control of a Joint Board of Operation

ORGANIZATION.—Incorporated in Feb. 1859, and has extensive surface road privileges in the south division of Chicago. Has a contract expiring Jan. 31 1927 with the Commonwealth-Edison Co., for the supply of its entire power requirements. The railway has abandoned its producing plants but retains its distributing plants.

FIELD OF OPERATIONS AND CHARACTER OF BUSINESS.—(Incl. Southern St. Ry.). Co. owns 335.97 miles of single track, all now operated by electricity. System covers the South Side of Chicago, extending from the centre of the business district south to 79th St. and between the South Branch of the Chicago River and the Lake.

Ordinances and Franchises.—On Feb. 4 1907 the City Council passed ordinances providing for a settlement of the franchise question. These ordinances were approved at the city election on April 2 1907 and formally accepted by the company's board of directors on April 15 1907. Suit to set aside franchise was dismissed in April 1912. V. 94, p. 1118. An extended outline of these ordinances, one to the Chicago City Railway Co., and covering the lines operated by that company, and the other to the Chicago Rys. Co., and covering the lines of the former Chicago Union Traction Co. (now the Chicago Railways Co.), was given in V. 84, p. 1123. The value of the tangible and intangible property of the Chicago City Ry. at date of the ordinances was fixed at $21,000,000. The city or any company authorized by it is given the right on Feb. 1 or Aug. 1 of any year, on six months' notice, to purchase the entire property of the two systems, or either of them, at their value at date of ordinance, plus "the cost of rehabilitation and extensions, including fair allowances for construction, profit and brokerage." But if the properties are acquired for operation by a private corporation, for its own profit, the purchase price is to be increased 20% —barring the case of a private company which might be willing to turn over to the city all profits above 5% on the cost of the investment. The companies are limited during their operation to an interest return of 5% upon the agreed value plus the cost of rehabilitation and extensions. All net profits above this are to be divided on the basis of 55% to the city and 45% to the companies, but a deficit in any year is to be made good out of the profits of subsequent years. After April 15 1910 the companies are required to set aside 6% of the gross receipts for maintenance and repairs and an additional 8% of the gross receipts to cover renewals and depreciation. Whatever portion of the two funds is not used remains in the funds and passes to the city or its licensee upon purchase. But if the two funds are not sufficient for the purposes named, the companies are obligated to supply additional funds. The franchises granted by the ordinances run until Feb. 1 1927. Purchase price of the property Jan. 31 1926, $55,819,970.

On Jan. 29 1912 City Council passed an ordinance providing for the acquisition by Chicago City Ry. of city lines of the Chicago & Southern Trac. Co. V. 94, p. 349, 629. The latter was sold at foreclosure in Feb. 1912. The lines outside the city were taken over by the Chic. & Interurban Ry.

Decision as to Regulations.—See "Chicago Surface Lines."

CHICAGO SURFACE LINES.

Under the title of Chicago Surface Lines, the properties of the Chicago Railways Co. and the Chicago City Railways Co. are now being operated as a single system under the control of a joint board of operation in accordance with an agreement between the two companies and the unification ordinance which became effective Feb. 1 1914. While under the terms of this ordinance and the agreement the ownership of the properties remains entirely separate and distinct, the combined earnings are divided upon an agreed basis. For the two years ending Jan. 31 1916 the Chicago Railways Co. received as its share 59% of the income remaining after the payment of all operating expenses, including taxes and maintenance, the other 41% of the income going to the Chicago City Ry. Co., including the Calumet & South Chicago Ry. and the Southern Street Ry., and, beginning with Feb. 1 1916 and until the expiration of its franchise in 1927, the Chicago Railways Co. will receive 60% of the so-called "residue receipts," and the Chicago City Ry. (including the Calumet & South Chicago and the Southern Street Ry.) 40%. The plan provided for a 5-cent fare throughout the city on surface lines, also through routing of cars from one division of the city to another. See details of the ordinance and the agreement for unified operations under date of Dec. 1 1913 in V. 98, p. 1693. An order permitting the State Attorney to file quo warranto proceedings to question the legality of unification ordinance was denied in March 1915. V. 100, p 1078.

The purchase was made under a modified plan of reorganization and readjustment dated Oct. 15 1907 and outlined in V. 85, p. 1269; see also p. 1576.

In Dec. 1912 purchased 6 miles of the Suburban RR. inside the city limits. (V. 95, p. 1402) and issued $22,554 bonds to cover cost.

FIELD OF OPERATIONS AND CHARACTER OF BUSINESS.—Comprises 594.34 miles of track (including 128 miles of the former Chicago Consolidated Traction Lines). Oper. 2,120 pass. cars, 257 miscell. cars.

The *franchises* granted by the ordinance expire Feb. 1 1927 and were approved at the popular election held April 2 1907. On Oct. 10 1910 supplemental ordinance was passed expiring Feb. 1 1927, covering lines of Chicago Consol. Trac. properties. V. 91, p. 1025.

In the remarks concerning the Chicago City Ry. on a preceding page of this publication will be found a brief summary of the main terms, requirements and conditions of these ordinances. A very extended outline of the same was printed in the "Chronicle" of May 11 1907, pages 1123, 1124 and 1125, to which the reader is referred for detailed information.

The ordinance for the Chicago Rys. Co. provides that the valuation of the properties acquired shall be deemed and considered to be $29,000,000 (the value fixed by a board of expert engineers acting for the city) plus $1,779,875 for expenditures from the date of the valuation on June 30 1906 to Feb. 1 1907, making total valuation of properties as recognized by ordinance $30,779,875 as of Feb. 1 1907. With the expenditures already made, the valuation of road, equipment and franchises on Jan. 31 1926 was computed at $94,258,469.

For further provisions of ordinance see "Electric Railway" Supplement of April 26 1924.

Harrison B. Riley, Halman G. Pettibone, Abel Davis, Frank G. Gardner and Henry J. Tansley, and provision is made in the trust deed securing the first mtge. bonds for the appointment of a permanent finance committee, now composed of Messrs. Henry A. Blair, B. A. Eckhart and F. H. Rawson, Chicago.

Co. and its eight underlying companies on Nov. 30 1910 to Andrew Cooke and the sale by the latter of all properties *within* the city limits to the Chicago Railways Co. (V. 91, p. 945, 1253, 1511), pursuant to an ordinance passed Oct. 10 1910 (placing valuation at $4,021,982), like in tenor, amendatory and supplemental to ordinance of Feb. 11 1907 (V. 91, p. 1025, 1159). See reorganization plan, V. 90, p. 1613; V. 91, p. 37. The lines *outside* the city were acquired by the County Traction Co. (now the Chicago & West Towns Ry.), which has no connection with the Chicago Railways Co. On Nov. 1 1910 a deposit agreement was entered into by the holders of the securities of the Chicago Consolidated Traction and its subsidiaries, providing for the exchange of the said securities for Chicago Rys. Co. purchase money 4% to 5% bonds and adjustment income 4% bonds, both dated Jan. 1 1911 and maturing Feb. 1 1927. For description of bonds and terms of exchange, see V. 91, p. 1384, and compare V. 90, p. 1613; V. 91, p. 214.

Suit Seeking Payment of Divs. Dismissed.—In June 1923 holders of Series I certifs. filed suit against the co. in the U. S. Dist. Court at Chicago seeking payment of divs. at the annual rate of $8 a share with accruals on that basis from Aug. 1 1917. The city of Chicago and Martin J. O'Brien, City Comptroller, were made parties to the suit because the latter failed, it is alleged, to certify to bonds to which the co. was entitled for extensions of its street-car system as required by ordinances. V. 116, p. 2515; V. 117, p. 2211. On March 22 1924 this suit was decided in favor of the company in the U. S. Dist. Court. This decision was affirmed by U. S. Court of Appeals Jan. 14 1925. V. 118, p. 1664. The U. S. Supreme Court also ruled against the certif. holders. V. 120, p. 2145.

MISSOURI

UNITED RAILWAYS CO. OF ST. LOUIS.

Is controlled by North American Co. of New York.

Receivership & Reorganization Plan.—Since April 12 1919 co. has been in the hands of a receiver. V. 108, p. 1823, 2331. A plan of reorganization dated Oct. 1 1924, was adopted by the reorganization committee and approved by a number of the various security holders' protective committees. For the various committees and details of the plan we refer to "Public Utility Compendium" of May 2 1925 and V. 119, p. 2531.

New Company Formed.—On Jan. 16 1926 the reorganization committee formed a new co., the *St. Louis Public Service Co.*, which was to purchase the street railway properties at foreclosure. See for names of incorporators V. 122, p. 483.

In Feb. 1926 receiver Wells entered into contract with the reorganization committee, whereby $4,200,000 of receiver's certificates would be paid in full in cash ($2,300,000 by receiver and $1,900,000 by committee), and $4,100,000 underlying bonds were to be exchanged for gen. 4% bonds. V. 122, p. 1028. Trustee was ordered to issue to the committee $6,000,000 additional bonds for $4,100,000 underlying bonds and $1,900,000 cash. The unissued $3,700,000 gen. 4s were to be cancelled. V. 122, p. 1172.

All of the outstanding series B receiver's certificates were called for payment on April 1 1926 at 100½ and int. See V. 122, p. 1313, 1612.

Rights for Pref. Stockholders.—On or before May 1 1926 pref. stockholders may subscribe for new com. stock of St. Louis Public Service Co. (the new co., see above in this statement) at $12 50 per share on the basis of 1½ shares of such new com. stock for each share of pref. held. Subscriptions payable in installments. See particulars in V. 122, p. 1918.

Holders of *St. Louis Transit Co. Impt. 20-Yr. 5% Gold Bonds, Due Oct.* 1 1924, were given the right to subscribe for new com. stock of St. Louis Public Service Co. at $12 50 on the basis of 10 shares of such new com. stock for each $1,000 bonds held. Subscriptions on or before May 1 1926 and payable in installments. V. 122, p. 1919. Int. on the above St. Louis Transit Co. impt. 5% gold bonds to April 1 1926 was to be paid. Funds for that int. were provided by receiver. V. 122, p. 2045.

ORGANIZATION.—Incorporated in Missouri on March 11 1898 as the Central Traction Co., but changed its name to above on July 10 1899. On Dec. 31 1906 absorbed the St. Louis & Suburban Ry., giving its pref. stock, share for share, for the stock of that company. The United Rys. guarantees the $4,500,000 gen. mtge. bonds of the St. L. & Sub. Ry. See V. 83, p. 39; V. 84, p. 105. In 1908 acquired a controlling interest in the Missouri Electric Co., successor to the St. Louis St. Charles & Western RR., which was sold at foreclosure in July 1905. For receivership and reorganization see above.

FIELD OF OPERATIONS AND CHARACTER OF BUSINESS.—The United Railways Co. comprises all the street car lines in operation in St. Louis, except Illinois Traction system operating out of St. Louis into Illinois. On Dec. 31 1925 owned total of 462.88 miles of track (including **the St. Louis & Suburban), of which 347.28 miles are in the city and 115.60 miles are county track. Has 1,604 passenger cars, 2 special cars, 2 express cars, 7 snowplows and 35 snow sweepers, 3 electric locomotives and 165 service cars of various kinds. Total, 1,818. The company was originally leased to the St. Louis Transit Co., but under a readjustment arranged in Oct. 1904 by Messrs. Brown Bros. & Co. (V. 79, p. 1333), the lease was canceled and the $17,264,300 stock of that company nearly all exchanged for voting trustees' certificates for common stock of the United Railways Co on the basis of $500 Transit stock for $200 voting trustees' certificates. Voting trust has expired and com. stock has been issued for trust certificates.**

Under this plan the $20,000,000 refund. and impt. mtge. bonds of the St. Louis Transit Co., of which $8,000,000 has been issued, were cancelled, and in their place the same company issued $10,000,000 of 5% improvement bonds guar. by the United Rys. Co. of St. Louis, this guaranty being secured by a mortgage on all of that company's property next in rank to that of its general mtge. These improvement bonds are now the only outstanding security of the Transit Co.

Power.—Power is partly purchased from the Union Electric Light & Power Co. (successor to the Mississippi River Power Distributing Co.). See V. 111, p. 1662; also, V. 112, p. 2529.

All obligations and stock of the Interstate Electric Corp are to be retired, and all obligations of the Commonwealth Lt. & Pow. Co. are likewise to be retired, except the Commonwealth Lt. & Pow. Co. refunding and unifying bonds as security for which 100,000 shares class A common stock and all of class B common stock of Inland Power & Light Corp. are to be pledged and deposited. CALIFORNIA

PACIFIC GAS AND ELECTRIC CO.

(*See Map on page* 224.)

ORGANIZATION.—Incorporated in California Oct. 10 1905 as a consolidation. In Oct. 1919 purchased the properties and substantially all of the $10,000,000 capital stock of the Northern California Power Co. Consolidated at $84 per share.

FIELD OF OPERATIONS AND CHARACTER OF BUSINESS.—Owns and operates extensive properties employed in the production and sale of electricity and gas for light, heat and power, about 60% of its revenues being derived from electricity and about 35% from gas. It also owns and operates the entire street railway system of Sacramento, 44 miles of track, and is engaged in the sale of steam for heating and of water for irrigation and domestic purposes, deriving approximately 5% of its revenue from these and other less important activities. All the properties owned in fee except those of the Mt. Shasta Power Corp. and California Telephone & Light Co. (of which the company owns the entire outstanding stock) and those leased from the Sierra & San Francisco Power Co. and Yuba River Power Co.

The operations of the company extend into 38 counties of central and northern California, having an area of 59,000 square miles and an estimated present population of over 2,200,000. The business field embraces the important San Francisco Bay section and the fertile Sacramento and San Joqauin valleys. The company serves eight of the twelve largest cities in California.

At the close of 1925 the company operated 28 hydro-electric generating plants having an aggregate installation of 534,819 h. p., four modern steam turbine electric plants with an aggregate installation of 190,340 h. p. also 263 substations and over 12,600 miles of transmission and distribution lines with a connected load of 1,498,878 h. p. A new station was opened in Aug. 1925, adding 108,580 h. p. to the total installed capacity, making the total hydro-electric capacity 534,819 h. p.

The gas department includes 16 manufacturing plants with an aggregate capacity of 106,148,000 cubic feet per day and 4,108 miles of mains.

Through purchase of the Northern California Power Co. Consolidated, acquired 585 miles of high-tension lines and 1,985 miles of low-tension lines, a power site on the Pit River, and six hydro-electric generating plants on BattleCreek and Cow Creek, with an aggregate installation of over 66,000 h. p., then marketing 30,000 h. p. V. 109, p. 173. In Dec. 1919 leased for 15 years the properties of the Sierra & San Francisco Power Co. V. 109, p. 2362. In Nov. 1925 applied to California RR. Commission for authority to purchase and operate the Middle Yuba Hydro Electric Co., Nevada County, Calif. V. 121, p. 2521. In Dec. 1925 applied for authority to purchase the Sacramento Gas Co. from E. H. Rollins & Sons, thereby eliminating the gas competition in Sacramento, Calif. For further details, see V. 121, p. 3132. In Jan. 1926 co.'s subsidiary, the Suburban Power Co. was authorized by Ohio P. U. Commission to acquire 10 electric properties in the district around Columbus, Findlay, Zanesville and Newark, O. For details, see V. 122, p. 349 under "Suburban Light & Power Co."

Franchises in substantially all of the cities and towns served, it is claimed, are perpetual, the U. S. Supreme Court on April 6 1914 having ruled that all franchises of public service corporations within the State of California obtained prior to Oct. 10 1911 were of perpetual duration and could not be altered.

CENTRAL CALIFORNIA TRACTION CO.

ORGANIZATION.—Organized in California in Aug. 1905 to construct an interurban system of electric roads for passengers and freight in the central valleys of California. Road operates over private right-of-way, except in the cities. *Franchises* in all the cities of the system run for 50 years. An additional freight and passenger franchise was awarded company in May 1909 for City of Sacramento. An assessment of $5 a share was called for payment Feb. 20 1908. V. 86, p. 667. In Jan. 1918 another assessment of $5 per share was levied on both classes of stock, delinquent Feb. 25 1918, to provide additional equipment, improve trackage and restore the company's credit by reducing floating debt. The necessity for this action was ascribed to years of unprofitable operation due to jitney competition, which is now regulated. See V. 106, p. 497.

In Aug. 1925 the Southern Pacific Co. applied to the I.-S. C. Commission for authority to acquire control of the company by exchange of stocks and bonds. For particulars see V. 121, p. 1099.

Plan to Reduce Interest, &c.—In 1917 holders of the 1st M. 5s signed an agreement reducing the int. rate from 5% to 2% for the years 1917, 1918 and 1919 and waiving default in int. and also the sinking fund provision. Compare V. 106, p. 497. Another agreement under same conditions expired Oct. 1 1922. A new agreement has been made whereby bondholders agree to accept 2½% instead of 5% for 1923, 1924 and 1925.

ORGANIZATION.—Berliner Staedtische Electrizitaetswerke A.-G., and Berliner Staedtische Gaswerke A.-G., which latter company guarantees under-mentioned note issue of Berliner Staedtische Eletrizitaetswerke A.-G., were organized by the City of Berlin, Germany, in 1923, for the purpose of separately operating the electrical and gas works formerly operated by the city, all the stock of both companies being owned by the City of Berlin. The first installation of electrical works was made in 1884, and of gas works in 1825.

FIELD OF OPERATIONS AND CHARACTER OF BUSINESS.—Berlin has a population of approx. 4,000,000. The electric company supplies about 80%, the gas company (Berliner Staedtische Gaswerke, A.-G. see above) about 75% of the total consumption of the city in their respective fields. The electric company owns and operates plants of over 205,000 k.w. and also purchases a substantial amount of additional current. Co. is expanding its plants to a total capacity of 400,000 k.w. to be ready by Oct. 1926. Owns 6,600 miles of distribution lines. Current is supplied for domestic use as well as for the local street and underground railroad and for numerous industrial plants in the city and vicinity. The Gas Co. (see above) supplies gas for domestic and industrial use, and owns plants of over 64,000,000 cu. ft. daily capacity. Sales in 1924 about 11,200,000,000 cu. ft., and in 1925 about 13,800,000,000 cu. ft.

Rates.—The City of Berlin (which owns all the stock of both companies) has agreed to rates for both services sufficient to cover operating expenses, rental (8% of gross), depreciation, interest and amortization of loans, and to provide working capital.

ELECTRIC POWER CORP.

(Elektrowerke Aktiengesellschaft.)

Controlled by United Industrial Corp. ("Viag"), which owns the entire capital stock. The entire stock of Viag is owned by the *German Government*.

ORGANIZATION.—Through the merger of various companies in 1921, corp. attained major importance and now supplies electric power within a territory with a population of over 16,000,000.

FIELD OF OPERATIONS AND CHARACTER OF BUSINESS.—Corp. supplies power entirely at wholesale, over 60% of its output being sold to distributing systems serving the Province of Brandenburg, incl. the City of Berlin, the Province of Saxony, the Free State of Anhalt and the Free State of Saxony. In this manner corp. supplies about 75% of the current consumed by the City of Berlin.

Corp.'s properties include 3 large modern plants with a total installed capacity of 312,000 k. w., and 628 miles of 110,000-volt transmission lines. These lines, with connecting 110,000-volt lines owned by various distributing companies served, form a total inter-connected 110,000-volt system of over 1,200 miles of lines. Three of co.'s steam plants are adjacent to extensive lignite coal fields owned by it and estimated to be sufficient to furnish its entire fuel supply for more than 50 years. 70,000 k. w. additional capacity are being installed and were expected to be completed early in 1926. Corp.'s transmission lines are also being extended into the Province of Silesia. V. 120, p. 1457; V. 121, p. 1568.

Relation to Dawes Plan.—Co. by reason of Govt. ownership (through Viag) of all of its capital stock, is now exempt from the operation of the so-called Dawes Plan. The German Govt., however, in order to equalize the reparations burden, requires co. to make certain annual payments, estimated as not exceeding $150,000, which are unsecured and correspond in amount to the annual charges for interest and amortization of Dawes industrial debentures which would be imposed upon its properties if privately owned. The total present installed capacity amounts to 100,800 k. w., or 136,957 h. p. In addition to these installations, co. is building a new power station in Neuhof of a capacity of about 150,000 k. w. It is expected that this plant will come into partial operation in the spring of 1926. Upon its final completion co. will have a total installed capacity of about 232,350 k. w., or about 310,000 h. p. Owns and operates 6 transforming stations and 24 substations. 1,185 miles of underground cable line, containing 2,555 miles of separate cable, and 329 miles of overhead line. RHINE-WESTPHALIA ELECTRIC POWER CORP.

(Rheinisch-Westfaelisches Elektrizitaetswerk Aktien-Gesellschaft.)

ORGANIZATION.—Organized in 1898. With its subsidiary companies, comprises the largest electric light and power system in Europe with respect to property value, earnings, capacity of power stations and number of customers served. Serves over 250,000 industrial and residential customers in a territory of nearly 6,000 sq. miles, and includes a large part of the Rhineland, extending from the Netherlands frontier on the north and west, into the Province of Westphalia on the east, and south to the River Ahr. This area includes the Ruhr District, the most important industrial section of Germany. The communities entirely supplied by the system have a population of approximately 4,000,000 and include the cities of Essen, Muehlheim-Ruhr, Gelsenkirchen, Crefeld, Muenchen-Gladbach, Wesel, Osnabrueck, Remscheid, Solingen and Neuss. In addition corp. furnishes electric energy to large portions of the cities of Cologne, Duesseldorf, Duisburg andOberhausen, and to the extensive plants of the largest inland harbor of Europe at Ruhrort.

The system includes 9 electric generating stations with an aggregate capacity of 635,000 h.p. The principal station, the Goldenberg plant, is one of the largest and most modern in the world, and has a capacity of 390,000 h.p. Its equipment includes four 67,000 h.p. steam-turbo units installed during the past 2 years. The transmission and distribution systems comprise over 600 miles of 110,000 volt steel tower lines and 8,250 miles of medium and low voltage lines which supply approximately 350,000 electric meters. The above figures do not include the many affiliated electric companies of whose stocks substantial amounts are owned. The electric output for the fiscal year ended June 30 1925 was 1,239,000,000 k.w. hours.

The fuel for corp.'s power stations is obtained almost entirely from hard coal and lignite mines owned by subsidiary cos. and located under or immediately adjoining the stations. The hard coal mines, estimated to contain 75,000,000 tons (of 2,000 pounds), are being mined at the rate of 1,400,000 tons a year. The lignite mines are estimated to contain 450,000,000 tons, and the power stations of the corp., which are designed to burn this fuel efficiently, consume appr. 4,000,000 tons a year. In the second half of 1925 corp. acquired a half interest in a company, located in the central part of Germany, which owns an electric distribution system and lignite mines having about 160,000,000 tons of fuel recoverable by the open pit method.

Corp. has under construction or in contemplation a number of extensions to its transmission system, including a line 300 miles in length (150 miles now nearing completion) to connect with hydro-electric power developments in southern Germany. These new high tension lines will be operated initially at 230,000 volts but are designed for an even higher pressure.

Corp. also owns a modern coke oven plant which supplies gas at wholesale to the City of Essen, and a high pressure gas transmission system with 150 miles of pipe lines, through which were delivered during the past fiscal year, 2,400,000,000 cu. ft. of gas obtained from neighboring coke oven plants. Corp. also owns the entire capital stock of two relatively small electric railway companies, and operates under lease several municipally owned lines.

Control.—The various municipalities and provinces served, together with the State of Prussia and the German Reich, own a substantial majority of corp.'s stock. V. 121, p. 2404

SAXON PUBLIC WORKS, INC.

(Aktiengesellschaft Saechsische Werke).

ORGANIZATION.—Organized in Dresden, Germany, Nov. 13 1923 under the laws of the German Reich and the Free State of Saxony. Since its organization all of the capital stock of the company has been and still is owned by the Free State of Saxony. At the time of its organization the company took over from the Free State of Saxony all of the electric power plants and coal mines owned and operated by the State since 1917, as well

as certain stock interests in similar enterprises which had been acquired by the State.

FIELD OF OPERATIONS AND CHARACTER OF BUSINESS.—Company is primarily engaged in the generation of electric energy through steam power plants, and its transmission and distribution throughout the State of Saxony and in certain adjacent territories. The territory served has a total population of over 5,000,000, with an aggregate area of about 6,950 square miles, and includes Dresden, with a population of about 611,000, and Leipzig with a population of 680,000. The present electric generating plants of the company have a capacity of 232,596 k. w. (incl. 97,000 k. w. in process of installation). Of the installed capacity, 85,500 k. w. is contained in the principal plant at Hirschfelde in Eastern Saxony. The power is delivered through a transmission and distribution system including 1,782 miles of high-tension lines of steel-tower and reinforced concrete pole construction. Of the foregoing, over 264 miles is 100,000 volt long-distance transmission line. At present approximately one-half of co.'s revenues derived from the sale of electrical energy is obtained from its retail business. V. 120, p. 706.

Electrical Output (Current Sold in Kilowatt Hours).

1919	60,846,639	1922	243,249,296	1925	486,681,704

Coal.—Company's coal fields cover an aggregate area of approximately 80,000 acres. Most of the coal is of the so-called "brown coal" or lignite character. Although this coal in its raw state has a relatively low heating content as compared with the best grades of American bituminous coal, it can be extracted at an extremely low cost through the system of open surface workings (which permits the use of continuous bucket dredging and other labor-saving machinery), inasmuch as the average depth of surfaces before reaching the coal strata is only 8 to 16 yards, below which the coal strata extend for a further depth of 32 to 50 yards. Consequently the coal can be delivered to the company's adjacent electric plants at an extremely low cost per unit of heating value.

The output of brown coal from the mines owned has increased from 613,431 metric tons in 1917 to over 1,363,000 metric tons in 1924. Over two-thirds of the output is used in the company's power plants and the balance is either sold to industrial customers in its raw state or is compressed in briquette form (thereby increasing its heating value nearly three times by the elimination of excess moisture) and retailed to local customers in the surrounding territory.

Through more than 1,600 borings the company's brown coal reserves have been reliably established by independent experts at over 3,400,000,000 metric tons, of which over 3,000,000,000 metric tons can be extracted through the above described method of open workings.

Inasmuch as all of the stock of the company is owned by the State of Saxony, the company is not required under the Industrial Charges Law (Industrie-Belastungs-Gesetz, Aug. 30 1924) to issue either negotiable or non-negotiable debentures under the so-called "Dawes Plan." TOHO ELECTRIC POWER CO., LTD.

(Toho Denryoku Kabushiki Kaisha.)

ORGANIZATION.—Incorporated in its present form June 1922. Represents a consolidation of numerous predecessor companies (some of which began operations as early as 1889) which for many years had been primarily engaged in the distribution of electric light and power. Next to Tokyo Electric Light Co., Ltd., the largest retail distributor of electric energy in Japan.

FIELD OF OPERATONS AND CHARACTER OF BUSINESS.—Directly or through subsidiaries company supplies, practically without competition, electric light and power to over 4,000,000 people in a territory of approx. 4,000 square miles. Company operates mainly in two distinct areas, the Kansai manufacturing district in and around Nagoya, Gifu, Nara and Toyohashi, in central Japan, and the industrially important Kyushu district in and around Fukuoka and Nagasaki, in southern Japan. These districts constitute two of the most important commercial and industrial sections of Japan.

Company generates and purchases power for distribution. The generating stations now owned or under construction have a total capacity of 190,593 k. w., including a second 35,000 k. w. unit now being installed in the Nagoya steam plant. The ultimate capacity of the Nagoya plant will be 105,000 k. w. Company also controls an additional 100,300 k. w. under favorable contracts, largely with closely affiliated companies. Other property owned or under construction includes substations with a total capacity of 482,135 kva. and over 8,700 route miles of transmission and distribution lines, as well as many valuable water power sites, principally on the Tenryu River, which co. plans to develop. As is usual with Japanese electric distributing companies, co. also often owns the fixtures and appliances used by its customers, in somewhat the same way as telephones are owned by the telephone companies in the United States.

In addition, co. owns all of the shares of the Toho Securities Co., which has investments in 18 utility and other companies, 8 of which are controlled by stock ownership. Among the companies so controlled is the Toho Gas Co., which does the entire gas business in Nagoya. Another substantial investment consists of stock of the Great Consolidated Electric Power Co. (DAIDO).

Company's system has 916,775 lighting and 28,761 power customers. V. 120, p. 1329.

Franchises.—Concessions for water rights and licenses for the generation and sale of power in Japan are granted under the authority of the Imperial Government, which has general supervisory power over such companies and reserves the inherent right to extend or revoke such grants under certain conditions. All important franchises of the company extend beyond 1955.

These properties constitute over 60% of the total physical assets of the co. and include generating stations with an installed capacity of 78,813 k.w., substations with a total operating capacity of 225,730 kva., and approx. 4,735 miles of transmission and distribution lines. They constitute a complete operating system serving more than 556,000 customers, in the important Kansai manufacturing district, centring around the important city of Nagoya.

The Imperial Japanese Government has consented to the mortgaging of these properties to secure these bonds and has given formal assurance that if properties are purchased by the Imperial Government or by municipalities, the rights of the bondholders will be safeguarded.

Franchises, licenses, water rights and power contracts cannot be mortgaged in Japan. A *sinking fund* is to retire at least $125,000 par value of bonds each 6 months prior to March 15 1930 by purchase in the open market, or by call by lot at par and int.; on Sept. 15 1930 and each succeeding interest date thereafter the sinking fund is to retire one-fiftieth of the bonds outstanding as of March 15 1930 through call by lot at 100% and interest. Secretary of Commerce Hoover Advocates State Utility Control.

The future of public utility regulation is discussed in the April issue of the "Savings Bank Journal" by Herbert Hoover, Secretary of Commerce, who maintains that State regulation is the only possible method by which the utilities can be governed to national advantage. In outlining his views he said in part:

There have been proposals that we should abandon our present method of regulating electrical public utilities through local State authorities and substitute a system of Federal centralized control.

In the practical situation in which the nation finds itself to-day in the matter of electric light and power development three facts do not seem inapropos. The first is that regulation together with progress and high skill in the industry is providing a commodity, electricity, at pre-war prices. It is about the only one in the nation. The second fact is that the total distribution of interest and dividends by the electrical companies taken as a whole has never exceeded 6% upon the values of all the property for rate-making purposes. The third fact is that the industry has expanded to meet public demand by fourfold in ten years. The State commissions may well receive a large portion of the credit for these conditions—their regulation has been effective.

Before we abandon the system of State control let us be sure that we have something better to take its place. There are certain facts and factors in the discussion of this problem concerning which I believe all will agree.

First, we should agree that regulation of public utilities is vital. The reasons are simple. Because of the fabulous duplication of equipment, of investment, of increased financial instability and operating expenses with increased cost of service to the consumer, which would be involved in a system of unrestricted competition, the 48 States acting independently have abandoned the notion of maintaining that kind of competition as a method of holding down rates and holding up service. But when we deliberately clothe industry with the security of monopoly, neither the industry or the public any longer disputes the necessity of full control of rates, service and finance by the Government.

Second, we can agree that a revolution is in progress in the electrical industry to-day caused by the scientific discovery of long-distance transmission of electrical power and the sequent economies in production and improvement in service to be gained by the consolidation of our electrical generators into central plants.

At this point I want to emphasize a distinction that has importance in all conceptions of regulation, ignorance of which have been responsible for much misapprehension. This inter-connection simply means the sale of surplus power from one district to another and does not bear any more implication of "trust" and "giant monopolies" than does the interchange of cars between different railway systems. And it has the same economic and public advantages.

The Objections.

First, it is contended that watering of stocks is now in progress in the operating and holding companies, and that this inflated capitalization may be reflected in increased rates.

Second, that the extension of power lines across State boundaries is creating a legal inter-State problem over which the States have no authority.

Third, that some of the States have not yet set up adequate administration for protection of public interest and that this delinquency in State action warrants Federal intervention.

Fourth, that this evolution of industry has developed "trusts" which will defy public interest until democracy will not be able to rule in its own house.

I propose now to analyze the situation as it stands to-day that we may see how far these assertions are warranted when weighed on the true scales of fact.

The first argument that over-capitalization or watering of stocks places a burden upon the consumers falls to the ground if all the States universally adopt the principles of State regulation now demonstrated in many of them. There may be watering of stocks in progress. But if rates be based either upon the true value of the plant and equipment or upon actual investment, watered capital does not and cannot affect consumers. Our State system of regulation is steadily building up this basis of regulation. In this manner most of the State commissions, broadly speaking, have disassociated capitalization from the rate base.

Furthermore, many of the State commissions are controlling the securities of the operating companies and allowing their issue only against actual value. A considerable amount of speculation is going on, especially in the stocks of holding companies, and it may well be condemned. But what I wish to express clearly is that in intelligent State regulation neither watered capital or speculation can affect the rates paid by the consumers.

The second of the reasons advanced for the Federal Government taking over regulation is that owing to enlargement of production and distribution electricity has become such a matter of inter-State commerce as to place it outside of control by any one State. This requires analysis, for the question has both economic and legal phases.

The argument sometimes is used that the power situation is parallel with the railroads, where Federal regulation has been found absolutely necessary. This is an illusion. It differs in several profound respects. Power has no no such inter-State implication as transportation. The grower of oranges, shipping from California, is affected by the freight rates of every railway all the way to the Canadian border and the Atlantic seaboard, for he must pay freight on all of them along the way to destination. The same farmer as a buyer of power is interested in only one power company—that in his immediate neighborhood. Rates between him and the borders of the continent do not affect his own rates in the remotest degree. Therefore, one State is not vitally interested in the rates of another State as in the case of railways.

Furthermore, there has been considerable exaggeration of the probable extent of inter-State power. For economic reasons these power districts in but few cases will reach across State lines. There will be interconnection between systems of different States, but even including this traffic, the proportion of actual inter-State movement in power to the intra-State movement will be comparatively small. At the present time less than 4% of the power developed passes State lines. The inter-State loading of our railway transportation probably comprises 70 to 80% of the total goods carried by rail. The proportion of inter-State movement in power is of high importance in bringing economy in power production and it no doubt will result in some increase. But there is no parallel with transportation.

The third contention of the advocates of Federal control is that some of the States have not or will not set up adequate machinery for protection of citizens and that, therefore, the Federal Government should intervene to protect citizens. This is one of the oldest contentions of all kinds of Federal action—that the nation shall intervene to remedy evils which the State can remedy but which some of them fail to remedy. But the citizens of the States may determine their policies for themselves. Failure to take steps of enlightenment in their own protection is simply a voluntary surrender of their sovereignty and their dignity. It is the negation of self-government. And Federal encroachment for this reason is the ultimate extinction of local government. If we had yielded to these pressures in years past and had attempted to remedy the failures of municipal and county and State Government by substituting Federal control of every evil, we would have no sense of local government left, and we should have seen none of the great improvement in local government which we have witnessed in the last 30 years.

The fourth contention of our opponents is that this modern evolution of the industry has developed "trusts" which do or will defy public interest. I have already stated that "inter-connection" in itself is no more evidence of a "trust" than the exchange of railway cars. Also, I may say that the ownership of a 100,000 horsepower plant would have been a "trust" only 15 years ago. To-day, in order to get cheap power, we are building that much into a single machine and somebody has to own it, and it cannot be bought at the ten-cent store, either.

But, be this as it may, this question of "trusts"—this fear of injury by giants—come to this: The States to-day have the authority to regulate big electrical companies as well as small ones. They are using it and I do not doubt that they will continue to use it. I am confident that American States are not going to surrender their rights and their freedom to any "trust" or "trusts." The American people have not forgotten how to take care of themselves.

Employee Ownership in Industry—Principle as Applied on Properties Operated by Mitten Management.

The subject of "Employee Ownership in Industry" was discussed on Feb. 17 by J. M. Shaw, Editor "P R T Service Talks," and Public Relations Director of Mitten Management, Inc., before the American Institute of Mining and Metallurgical Engineers. His remarks dealt in particular with the principle as applied on the properties operated by Mitten Management, and we quote herewith what he had to say:

The subject assigned to me for discussion to-day is "Employee Ownership in Industry." I am presuming that the group which I am addressing has a general knowledge of this subject quite equal to my own, and if in this instance I am to add anything to the sum of human knowledge, I can best do so by confining myself more or less specifically to the principle of employee ownership as it applies ideally and in actual practice in our own organization, which has been a pioneer in this latest phase of industrial relations. For the purpose of introducing the subject, however, I want to paint a brief picture of the origin and progress of employee ownership in American industry.

The germ of this phase of industrial relations lies in the belief that a man with a stake in the game is likely to make a better worker than the man whose only interest in his job is his hourly wage. This belief has undoubtedly been held by certain far-sighted leaders almost since the dawn of the industrial revolution. Sporadic attempts to encourage the ownership of stock among employees by large corporations were made before the war, and a measure of success was secured by some of the larger groups, notably the United States Steel Corporation. The principle of employee ownership is not therefore an entirely new one. It is safe to say, however, that the World War, by forcing public utility corporations to seek a new field for capital at the same time that the war spirit and Government educational facilities had shown the people the value of direct investment, really watered the seed which has sprouted with mushroom-like rapidity in the past few years.

Statistics are tiresome, and most of us have been completely surfeited with them so far as they relate to this much discussed subject. Suffice it to say that almost every wideawake corporation to-day, and particularly those in the public utility field, have taken full advantage of the new willingness and eagerness on the part of their men and on the part of their patrons, too, to own a slice in the property. The day when the small hoard was converted into coin of the realm and hidden away behind a brick in the fireplace is no more. In its place is dawning an era which will reveal the enlightenment of labor as to the real uses and the inherent righteousness of its age-old bogey-man—capital.

Several years ago I clipped a cartoon from the New York "World" and had it framed with the inscription beneath it—"A significant forerunner of a new industrial era." It hangs over my desk to-day as an indication to posterity that, while somebody else may be given the credit for settling the longest coal strike on record, a modicum of praise should yet come my way for foreseeing how it might have been prevented. The cartoon shows a locomotive engineer and a coal miner in violent conflict, while in the background, rolling about in uncontrollable mirth are the railroad executives, the coal operators, the bankers and others. The cartoon is emblematic of the classic correspondence between Mr. Stone of the Brotherhood of Locomotive Engineers and Mr. Lewis of the United Mine Workers. You will recall that the engineers, through their labor bank, in which all stockholders and depositors are members of the union, had purchased a coal mine in West Virginia. Finding themselves unable to compete with the private operators around them, wage and labor troubles crept into their lives. A strike ensued. Mr. Lewis remonstrated with Mr. Stone, urging him by all the tenets of labor unionism which they both held dear, to think of these suffering members of the coal miners' union. Mr. Stone replied that he was sorry, but the locomotive engineers were capitalists and in effect could not pay the miners a nickel more than they were worth without endangering the investment of the members of the engineers' union. The question which crossed my mind when I read that story and saw that cartoon was this—How long will it be before the miners, in self-protection, own a railroad. And how long after that will it be before labor and capital generally, being merged completely as one unit, bury the hatchet before it cuts off their collective head.

That incident is illustrative of a tendency which is nation-wide. A man does not burn down his own house. Nor is a man so much inclined to stop work when he finds that thereby he not only cuts off his pay envelope but

his dividends check as well. Forward looking industrial managers have recognized the truth of this and have applied the principle of employee ownership and common sense relationships between men and management, with the result that greater production has followed with less tendency for a complete cessation of labor in time of greatest demand for the product.

But I promised to confine my remarks to the principle as applied on the properties operated by Mitten Management, and I shall do so. The germ of the P R T co-operative plan, out of which our plan of employee ownership has grown, had its inception 30 years ago, when T. E. Mitten settled a violent and disastrous strike on the street railways of Milwaukee. Sorrow and suffering ran riot, with men underpaid, public poorly served and investors ruined. It was a sorry spectacle, but one which is repeated constantly and on a far larger scale, even in these more enlightened times. Mr. Mitten resolved to devote his industrial life to the solution of the problem and the bringing about of a condition whereby such inhuman and uneconomic industrial war might be relegated to the member of historians, where it might take a suitable place alongside the feudal system and the practice of human slavery.

Successively in Milwaukee, Buffalo and Chicago, Mr. Mitten harmonized the aims and desires of the warring elements, bringing increased wages, better public service and fair returns on investment. Fifteen years of striving after an ideal had convinced him that with the complete consummation of that ideal would come permanent peace in industry.

It was at this stage of his career that Philadelphia was looking for a Moses to lead its transit system out of a wilderness of confusion and strife. The company was facing bankruptcy, equipment was obsolete and worn out, service was demoralized and the employees—underpaid, disgruntled and rebellious following a series of disastrous strikes, were in open revolt against their management and fighting even more bitterly among their rival union organizations. Mr. Mitten looked the situation over, decided that if his theories of fair dealing and paying a man what he was worth would bring order out of such chaos as that, he would be doubly sure that they were right and applicable in principle to any similar industrial situation.

Mr. Mitten dropped all his other interests, and applied all his energies to the Philadelphia problem. The men were unable to agree as to which of the rival unions should be their point of contact with the management, and finally voted to adopt a plan prepared by Mitten Management. That was in 1911, and that plan, amended and improved through the years of experience and struggle, yet identical in basic principle, is still the governing document by the guidance of which all relationships between men and management are decided.

Among other provisions, the plan provided that the wages of the men should be paid from a fixed fund, set aside annually out of earnings, so that wages would increase if gross earnings increased and would decrease if the gross fell off. Management representatives and elected representatives of the men sat across the table constantly and worked out their joint problems man to many. It was not easy to break down the wall of suspicion and distrust which years of unfair dealing and broken promises had built between labor and capital. But patience was rewarded. The men began to learn that leaving prospective passengers stranded on street corners had a definite effect on earnings, and low earnings meant low wages. They came to understand that deliberate and spiteful rear-end collisions were expensive and left less money in the till. Slowly it dawned on them that here was a management that meant what it said when it preached the doctrine of "live and let live."

Gradually the earnings climbed and regularly every six months wages climbed in due proportion. "Increased production will mean increased wages" was the war cry of the management, and the men responded. Seven years of hard work found wages doubled, and slowly but surely the men were being prepared for the responsibilities of ownership. The abnormal conditions of the war forced a recession from the fixed fund plan, and wages thereafter were based on the average of three of the leading cities.

But while men and management were thus moving forward hand-in-hand, what of the other parties to the trinity of industry—the owner and the consumer? Stockholders, for the first time since the formation of the company in 1902—15 years before—began to receive regular dividend checks. Service was vastly improved and modern equipment put into operation over routes which had been entirely revised under a plan of scientific co-ordination. And all this at a time when the street railway industry, as every man knows who was interested in public utility securities at that time, was entering stormy seas which left the wreck of many a good street railway system on the rocks of increasing costs and political regulation along a shore all too dimly lighted by the beacons of public understanding.

The stone that the builders rejected had become the head of the corner. The Philadelphia transit system, holding steadily to the five-cent fare and giving service equal to the best in America, did not resemble in any particular the decrepit cripple of ten years before. The eyes of the industrial world turned to Philadelphia to see the marvelous transformation which a host of prolific writers had called a miracle. It was no miracle. It was merely the working out of a principle which all men are willing to believe, but which up to that time very few had been willing to accept and put in practice. Some called it a great philanthropic enterprise. It was nothing of the kind. It was a pure business venture with an eye to the profits in the enterprise just as widely open as that of any private corporation represented here to-day.

But what has all this to do with employee ownership? Everything. Because without reading the synopsis you cannot appreciate the present chapter in this slowly unfolding drama.

By 1922 it had become apparent to men and management alike that wages based on the average of three cities where the benefits of co-operation were unknown was not the ultimate development of the Mitten Managemnt principles. Co-operation between men and management had brought about a saving to the property of more than sixteen million dollars a year, compared with the old conditions of strife and inefficiency. It was felt that this remarkable accomplishment should be especially rewarded and its continuance and enhancement encouraged. It was agreed that if, in 1922, the men could earn a sum not to exceed 10% of the payroll, following the payment of the dividend on P R T common stock, that sum would be paid them. They succeeded in earning the full 10% and instead of dissipating the proceeds, they kept it jointly in a fund administered by their own trustees, and invested it in the stock of their own company.

That was the beginning of the actual ownership of the property by P R T employees. Four years have gone by and the employees now own one-third of the common stock of the company. The first stock that they purchased cost them $30 a share on the open market. Yesterday P R T common was sold on the market at 56, six points above par, and almost double the first price paid by the men.

Mitten Management has applied the same principles on the International Railway Co. of Buffalo, which it began to operate in 1920. In 1922, following unsuccessful attempts to deal with radical labor leaders, the management was faced with a strike. It fought the strike, was victorious, secured the co-operation of the employees under the co-operative plan, and to-day service is greatly improved, financial stability is in sight, and the 3,000 employees are being paid wages considerably in excess of those sought by the strikers and which the management could not pay because of the obstructive tactics of the men themselves. The I R C employees to-day own a considerable block of the stock and bonds of the company, and the stock which they purchased in 1923 at $10 per share is now selling around $30.

The criticism has been made that employee-ownership plans frequently are based on the sale of non-voting stock. Accordingly, the principle of employee ownership is frowned on in the highest circles of labor unionism. They feel that the distribution of stock to employees is a sop in many cases, unaccompanied by its equivalent in power over management. Concerning the justice of this claim I have nothing to say. I can say, however, that so far as our own organization is concerned, one-third of the voting stock of the company—200,000 shares out of a total of 600,000—is held in one block and voted at every meeting by trustees of the men's own selection. The next largest block of stock is about 5,000 shares. In such a corporation, a block of 200,000 shares comes pretty close to a controlling interest.

The power which is thus placed in the hands of the employees has caused our organization to be called the first soviet in America. Is it not disastrous, ask the critics, to put the men in position to force the management to increase their wages or to pay out every available nickel in dividends? And our answer is emphatically "No." Mitten Management's experience is that the employees of P R T are far more to be trusted with control than the real estate speculators who originally built their property, or the financial geniuses of a still later day who brought it to the brink of ruin fifteen years ago. These men who own so large a portion of the workshop in which they earn their daily bread, have learned that both their dividends and their wages are dependent on the kind of effort that they put forth in giving service to their community.

We find that as employee-ownership increases, the appreciation of responsibility also increases. Above all, our experience has taught us that when the workers appreciate that the management is honest in its intention to treat the men fairly, the men never violate that confidence. In fact they are ever ready to go the management one better. We have had countless examples of it, among the individuals and in the mass. In 1920, when the management was hard pressed financially and striving to keep the basic five-cent fare for the city, the men offered the use of their million-dollar saving fund without interest. When the management was faced with a strike of the union street car men of Buffalo, deluded by radical labor leaders, the P R T men went to Buffalo and ran the cars, suffering the epithets of a populace in sympathy with the strikers, to show their faith in the management. In another time of stress, with a wage increase due the men, they poffered to forego their increased wage until suc htime as the management felt the financial condition of the company could stand it. When that time came and the deferred wage was paid, the men promptly put it into the saving fund which they had formed with the encouragement of the management during the period of high war wages.

It does not take working men long to appreciate the value of wise investment. Shortly after the inauguration of the P R T employee-ownership plan, it was estimated by one of the leaders of the men that two dollars a week deposited regularly in the employees' saving fund, plus the dividend checks paid four times a year by the wage fund, would give to the 25-year-old employee remaining forty years in the service of the company an estate of $52,350 at the age of retirement, which would pay him a return nearly twice his present wage. A man 45 years of age remaining for 20 ye rs in the company service would leave an estate of $13,425, and after his retirement at 65 this principle would pay him a monthly income of $105. It does not take much argument to point out the wisdom of this to a man who otherwise looks forward to a pension of $40 a month.

P R T men have just sold to the car riders of Philadelphia $10,000,000 of the company's 7% preferred stock. It took just ten days to do it, in spite of the fact that no more than 20 shares were sold to one subscriber, and the average actually was about five shares. Not one cent was paid in brokers' commissions or in commissions or prizes to the men who distributed application blanks and received subscriptions on the cars. Thus it can be seen that employee-ownership not only inspires a new spirit of co-operation in the working force itself, but engenders in the com[illegible]y a confidence and faith in the organization that makes new financ[illegible] merely a matter of asking for the money.

When the P R T organization moves, men and management move together. Together they contributed to the Sesqui-Centennial celebration to be held in our city in 1926. Together they made up a large deficit in the police pension fund of the city in response to a public call by the Mayor. Together they contributed toward removing the debt from Dr. Russell H. Conwell's church when that burden was weighing down their friend and admirer of their organization in his last illness. Together, in their latest venture, they have offered a million dollars to refinance the Producers & Consumers Bank, and to make good dollar for dollar to the depositors and stockholders—all labor unions and their men—who otherwise stand to lose heavily.

The responsibilities of Mitten Management itself have grown as it has applied the principles of employee-ownership. To-day our organization operates the street railway and interurban systems of Buffalo and the Niagara frontier. We manage the entire street car, motor bus, subway and elevated systems of Philadelphia and vicinity, and have just applied to the Public Service Commission for the right to operate taxicabs on a large scale as part of the general system.
